INDUSTRIES

In many countries police work is hampered by the lack of straightforward communication. The safety of your officers and their efficiency increases by using IHM's Radio Communications System designed for Rural Police Stations as the devices and applications ensure reliable real-time information.

Police work is complicated or at times even seriously hindered by the simultaneous use of multiple technologies, for instance short and long range systems. This is a huge problem, since officers often find themselves in high stress situations and need to stay focused at all times without having to worry about technical difficulties.

Easy and efficient communication

IHM has designed a new communication system, that let operators manage V/UHF radio stations as well as MF/HF radio stations from the same operator panel. Thus, the right information at the right time is provided to the officers in a smooth and easy way.

Full range of features

The IHM solution is equipped with features letting operators handle communication, including one-on-one conversations with radio users based on selective calling or open calls. When several operators are connected to the system it is even possible for the operators to monitor ongoing calls between other parties.

Flexible patching and logging

It is possible to patch calls from one type of radio system to another and to patch telephone calls received by or initiated from the control centre. As an add-on feature, the system can even be equipped with an interface for a Voice Logging Recorder for storage of calls.

Always the right interface

With the IHM system you get access to a range of simultaneous interfaces for a number of different radio systems such as analogue and digital radios, as well as analogue and IP telephony. This impressive level of compatibility makes sure that your officers are never alone in the field.

Big solution, small investment

IHM Rural system is ideal for law enforcement operating in regional areas.

FUNCTIONS

- Two-way communication
- Group communication
- PC based control station
- Push-to-talk feature
- Flexible configuration
- Service agreement with 24/7 year-round support

TECHNICAL FEATURES

- Central or distributed control centre
- All-in-One PC solution with touch function
- Remote operation of radio stations
- Remote operation via IP Interface
- Control box (analogue and IP)
- Interface for analogue phone lines
- Interface for analogue Voice Logging Recorder
- Automatic short time logging of calls at the operator position

SOLID REFERENCES

For more than 35 years we have delivered control room solutions for emergency services and the maritime sector, including the offshore business. We possess the experience and know-how to help you with your specific needs.

We have customers worldwide, and listening to them keeps us up at the leading edge of market needs – now and in the future.
